LED LIGHTING

## Brighten your workspace.

The LED Power Rail System merges a DC power source, energy-efficient LED lighting and low voltage modular components to let users customize their workspace.

**Brilliant:** More than just a lamp, cool-running LED lights emit very little heat, have no fragile filaments and work for up to 50,000 service hours. Smart and versatile too, as the multitasking Power Rail System provides power distribution: re-charge your cell phone, PDA or MP3 player for tomorrow's trip.

With LED technology you enjoy versatility, dependability and long term energy savings, as LED requires up to 35% less power compared to conventional fluorescent lamps. LED can contribute to earning LEED points too. Brilliant, yes!

The LED Lighting System Task Light combines the look and function of a task light with the benefits of LED technology. Featuring a unique touch-on, touch-off and touch-dimming function.
